ENSURE REGISTRATION OF EVERY BIRTH AND DEATH

PREFACE

This issue of the Report on 'Vital Statistics of India based on the Civil Registration System' for the year 2009 provides an overview of the working of the Civil Registration System (CRS) in the country and presents a compilation of data on registered births, deaths and infant deaths with rural-urban & sex-wise break-up and sex ratio at birth based on Civil Registration Records. Ideally, an Annual Report on vital statistics containing more detailed information should have been brought out. However, due to non-availability of Annual Reports from some of the major States and limited availability of information contained in the Annual Reports of other States, the report for the year 2009 containing key information has been brought out for the convenience of users. An attempt has been made to present more detailed analysis as compared to previous Reports.

2. The publication is divided into two parts. Part I provide a brief review of the Civil Registration System and contains a summary analysis of data on registered births, deaths, infant deaths and sex ratio at birth at State level. Part II incorporates the main tables which provide State and District-wise data on registered births, deaths and infant deaths with rural-urban & sex-wise break-up and sex ratio at birth.

3. The data source for the report is the statutory Annual Statistical Report prepared by the Chief Registrars of Births & Deaths. In respect of States where these reports have not been prepared, the information provided by the Chief Registrars has been used. I take this opportunity to express my sincere gratitude to all the Chief Registrars of Births & Deaths for their kind co-operation in providing the required information.

4. The report has been prepared in the Vital Statistics Division of this office. I would like to place on record my appreciation for the efforts put in by Smt. P. A. Mini, Deputy Registrar General, Shri R. K. Gautam, Joint Director, Shri Ajay Khanna, Deputy Director, Shri Sandeep Rai, Assistant Director and Shri Vimal Kaul, Sr. Compiler under the overall guidance of Shri Deepak Rastogi, Additional Registrar General, India.

Overview of Civil Registration System (CRS)

1. Registration of birth is a right of the child and is the first step towards establishing their identity.
2. It is compulsory to report births and deaths to the Registrar of Births and Deaths under the Registration of Births and Deaths Act, 1969.
3. Births and Deaths are registered only at the place of their occurrence.
4. Head of the household is responsible to report births and deaths that occurred in the house to the Registrar of Births and Deaths.
5. It is the responsibility of the officer in charge to report the births and deaths that occur in hospitals, nursing homes, health centres, etc. to the Registrar of Births and Deaths of the concerned area.
6. For reporting of events, prescribed forms are used, Form 1 for live birth, Form 2 for death and Form 3 for still birth.
7. Midwives and other Medical and Para-medical persons who have attended a birth of a child are duty bound to notify the Registrar about the occurrence of the birth.
8. Keepers of crematoria and burial grounds, and persons required to be present at such places by a local authority are required to notify the Registrar about the occurrence of the death.
9. The Registrar of Births and Deaths have the power to obtain information regarding birth/death from those who are in the knowledge.
10. Births and deaths are to be reported within 21 days of occurrence of the event.
11. A Birth/Death certificate is to be issued free of charge for events reported within 21 days.
12. Births and deaths reported after 21 days but within 30 days can be registered on payment of prescribed late fee.
13. Births and death reported after 30 days but within one year can be registered on production of an affidavit, permission of the prescribed authority and payment of a late fee.
14. Births and deaths reported after one year can be registered only with the permission of a First Class Magistrate and payment of prescribed late fee.
15. Births can be registered without name of the child.

16. Name of the child can be reported to the registrar for entering in the Birth Register within one year of registration free of charge.
17. Name of the child can also be entered after one year but within 15 years of registration on payment of prescribed late fee.
18. Persons giving information about births/deaths are required to give it under their signature.
19. Errors in the particulars of births or deaths in the registers can be corrected according to the prescribed procedure.
20. Wrong and fraudulent entries can be cancelled by the Registrar of Births & Deaths.
21. Under Section 17 of the RBD Act, 1969, any person can cause a search in the birth/death registers for any entry and obtain a certified extract (Birth/Death Certificate).
22. Extracts issued under Section 17 of the Registration of Births and Deaths Act shall be admissible as evidence of birth or death to which the entry relates.
23. All Registrars are to send a monthly return to the District Registrar or Chief Registrar.
24. Births that occurred outside the country can also be registered in India within sixty days of return of the family at the place where they settle.
25. There is no provision to register deaths that occurred outside the country.
26. Non-reporting of births and deaths, giving false information for inclusion in the register, refusing to put signature in the reporting form/register and non registration of events reported to the registrar is a punishable offence.
27. Under the RBD Act, 1969, Registrars and Sub-Registrars are the public servants.
28. Registration of births and deaths made prior to implementation of the Registration of Births and Deaths Act, 1969 is deemed to have been done under the same Act.
29. On adoption of a child, the name of the adoptive parents and a new name for the child can be entered in the birth register.
30. Registration of births and deaths is in the interest of the individual and the nation.

EXECUTIVE SUMMARY

A unified process of continuous, permanent and compulsory recording of the vital events and characteristics thereof, as provided through the legal requirements of the country, is called Civil Registration System (CRS). In India, the Registration of Births and Deaths Act, 1969, provides for the compulsory registration of births and deaths. Civil Registration records are the best source of Vital Statistics. The records resulting from Civil Registration System have two main uses. First, as a personal legal document, required by citizens as proof of facts e.g. age, identity etc and second, the data generated through a complete and up to date System of Civil Registration are essential for socio-economic planning and also to evaluate the effectiveness of various public's related programs. They also serve as the cornerstone of public health systems. This Annual Statistical Report on Vital Statistics of India for the year 2009 has been brought out on the basis of data made available by the Chief Executive Authorities i.e. Chief Registrar of Births and Deaths of States/Union Territories. The main findings of the report have been summarized below:

VITAL INDICATORS: Notwithstanding the difference in approach of data collection between CRS and Sample Registration System (SRS), a comparison of vital rates based on these two sources helps in evaluating the performance of CRS over SRS. Level of reporting helps in reviewing the registration system and defining measures that would be necessary to improve registration levels across the country. It is around 81% of the registration units at national level during 2009. Such reporting level by rural and urban registration units are about 80% and 86% respectively.

Birth Registration:

- The number of reported registered births has more than doubled in the year 2009 as compared to 1981 (increased to 21.3 million in 2009 from 8.6 million in 1981).
- The share of registered births to total estimated births under SRS is increasing year by year which in result shows the significant improvement in birth registration.
- The share of male registration is more than the female for registered births.
- The level of registration of births has increased from 56.2 per cent in 2000 to 81.3 per cent in 2009.
- The level of registration of births is above 90 percent in as many as 8 major States namely Gujarat, Haryana, Karnataka, Kerala, Maharashtra, Punjab, Rajasthan and Tamil Nadu in 2009.
- The birth rate worked out to 18.3 per thousand populations during 2009 as compared to 22.5 from SRS birth rates.
- The gap between the birth rates based on CRS and SRS is narrowing down over the year which is a good indication of improvement in the functioning of CRS.
- Birth Rate reported under CRS in some of the better performing States namely Gujarat, Kerala, Maharashtra and Punjab is on higher side than that of SRS birth rate. This difference may be due to the fact that SRS estimates are based on usual

residence while events registered at the place of occurrence irrespective of the place of residence under CRS.

- The Sex Ratio at Birth has shown downfall of 6 points during 2009 as compared to 2008 and it is 898.
- The gap between the sex ratio at birth based on registered data and that of from SRS has been narrowing down during the period 2000-2008.
- Highest Sex Ratio has been reported by Karnataka (1011) followed by Andhra Pradesh (985) during 2009.
- Lowest Sex Ratio has been reported by Bihar (715) followed by Arunachal Pradesh (806).

Death Registration:

- The number of registered deaths has also more than doubled in the year 2009 as compared to 1981 (5.7 million in 2009 from 2.7 million in 1981).
- The share of registered deaths to total estimated deaths under SRS is increasing year by year with fluctuating trend.
- The share of male is more than the female in case of death registration.
- The share of rural is about 3/5th in case of death registration in total registered deaths during 2009.
- The level of registration of deaths has increased from 48.7 per cent in 2000 to 66.9 per cent in 2009.
- In respect of the level in registration of deaths, only 3 major States namely Kerala, Punjab and could achieve 90 percent and more in the year 2009.
- The death rate worked out to 4.9 per thousand populations during 2009 as compared to 7.3 from SRS death rates.
- More infant deaths have been registered in urban area than the rural area.
- Among all States, only 5 States namely Goa, Kerala, Mizoram, Punjab and Tamil Nadu have achieved the level of more than 90 per cent registration of both births and deaths during 2009.
- A substantial gap can be seen in the level of registration of births and deaths between three groups, i) Empowered Action Group (EAG) & Assam, ii) Southern States and iii) Other States/UTs over the period 2000-2009.
- Notwithstanding the difference in approach of data collection between CRS and Sample Registration System (SRS), a comparison of vital rates based on these two sources helps in evaluating the performance of CRS over SRS. Crude birth & death rates based on registered events for most of the better performing states are in close proximity to that from SRS.
- There is a significant gap in the IMR based on CRS with that of from SRS in almost all States/UTs. The netting of infant deaths under the CRS continues to be a major concern.

GLOSSARY OF TERMS

Birth: Live birth or still birth.

Live birth: Complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, and each product of such birth is considered live-born.

Still Birth: Foetal death where a product of conception has attained at least the prescribed period of gestation.

$$\text{Crude Birth Rate (CBR)} = \frac{\text{Number of live births registered during the year}}{\text{Mid-year population}} \times 1000$$

Death: Permanent disappearance of all evidence of the life at any time after live birth has taken place.

$$\text{Crude Death Rate (CDR)} = \frac{\text{Number of deaths registered during the year}}{\text{Mid-year population}} \times 1000$$

Infant Death: Death of a child less than one year old.

$$\text{Infant Mortality Rate (IMR)} = \frac{\text{Number of infant deaths registered during the year}}{\text{Number of live births registered during the year}} \times 1000$$

Level of Registration: The level of registration, defined as the percentage of registered births/deaths to the births/deaths estimated through SRS, determines the performance level of a State / Union territory with regard to functioning of Civil Registration System.

$$\text{Level of Registration (LOR)} = \frac{\text{Number of events registered during the year}}{\text{Number of estimated events for the year}} \times 100$$

Mid year Population: Population at the mid-point of the year, i.e., 1st July of the year.

$$\text{Number of estimated events for a year} = \text{Mid-year population} \times \text{SRS Rate}$$

$$\text{Sex Ratio at birth (SRB)} = \frac{\text{Number of female births registered during the year}}{\text{Number of male births registered during the year}} \times 1000$$

Gross Natural addition to the Population = Total Registered Births – Total Registered Deaths

Rate of Natural Increase = CBR- CDR

PART-I

REVIEW AND ANALYSIS

CIVIL REGISTRATION SYSTEM:AT A GLANCE

Demographic features of India as per the Civil Registration System (CRS)				
Registration of Births		2007	2008	2009
i)	Estimated Mid Year Population (in '000)	1134024	1150196	1166228
ii)	Expected Live Births	26195954	26224469	26240130
iii)	Number of Registered Births	19469756	19993799	21292574
iv)	Level of Registration	74.5	76.4	81.3
v)	Level of Registration after excluding U.P. & Bihar	86.3	89.2	89.2
vi)	Crude Birth Rate (per thousand)	17.2	17.4	18.3
Registration of Deaths				
i)	Expected Deaths	8391778	8511450	8513464
ii)	Number of Registered Deaths	5804922	5638131	5677705
iii)	Level of Registration	69.3	66.4	66.9
iv)	Level of Registration after excluding U.P. & Bihar	73.7	73.2	75.0
v)	Crude Death Rate (per thousand)	5.1	4.9	4.9
Registration of Infant Deaths				
i)	Number of Registered Infant Deaths	152460	175207	180865
ii)	Infant Mortality Rate	8.0	9.0	8.0
iii)	Percentage of infant death to total deaths	2.6	3.1	3.2
Gross Natural addition to the Population				
i)	Person	13664834	14355668	15614869
ii)	Rate of Natural Increase (CBR-CDR)	12.1	12.5	13.4
Sex Ratio at Birth				
i)	Number of Registered Male Births	6387285	7511406	9054521
ii)	Number of Registered Female Births	5765895	6761305	8126390
iii)	Sex Ratio at Birth	903	904	898

Note: Total registered births do not match with the total of male and female registered births due to non availability of sex-wise details from some of the States.

CHAPTER – I

CIVIL REGISTRATION SYSTEM - AN INTRODUCTION

1.1 The requirement for a complete and up to date Vital Statistical System to yield reliable data on vital events hardly needs any emphasis. These data are essential for socio-economic planning and development and also to evaluate the effective implementation of various programs. The chief sources for data on vital events in India are Civil Registration System (CRS), Sample Registration System (SRS) and Population Census. The Population Census remains the main source of information on population and its characteristics; however, being a decennial exercise, it does not provide the measure of population change from year to year. The measures of fertility and mortality derived from the Census are centered on the midpoint of the decade and as such do not provide annual change in the population. Of the other two sources of vital statistics for getting the vital rates on a regular basis, the SRS has been designed to provide reliable estimates at National and State level. Robust estimates of vital rates at District and sub-district level on an annual basis through sample survey are difficult to obtain on account of prohibitively large sample size and variety of resultant factors such as controlling of non-sampling errors etc. CRS is thus the only source for providing vital rates at district and sub-District level. Rather a complete CRS can provide these rates at all administrative levels.

1.2 The Civil Registration System (CRS) may be defined as a unified process of continuous, permanent and compulsory recording of the vital events and characteristics thereof, as per legal requirements in the country. In India, the Civil Registration System cover registration of births and deaths only. Civil registration system provides the best source of information on the vital rates at all levels. Full coverage of vital events by registration machinery only can help in reaching to the high-quality vital rates which may be used for planning or research. Therefore, concentration should be given to the proper monitoring of the activities under the system. Civil registration systems are considered to be complete if they cover 90 per cent or more of all live births and deaths taking place within a country or area. However, in India the coverage of registration system is incomplete and not up to the mark to be utilized for statistical purposes at the National level but there are 18 States/UTs where the coverage of birth registration is more than 90 per cent and 11 States/UTs where the coverage of death registration is more than 90 per cent.

1.3 The registration records are primarily useful for their value as legal documents and secondarily as the source of vital statistics. Civil registration as a source of vital statistics is relatively less expensive, as the statistics generated from the registration records are the by-products of an essential administrative process. The registration records can also generate current and continuous statistics, which can be more accurate than any other method of data collection. However, the reliability of the statistics obtained through the registration system depends much on the completeness and promptness with which events are registered and the accuracy of the information in the registration records. The improvement in the system of registration of births and deaths is critically dependent on how much importance is attached to the data on births and deaths by the respective States and District administrations. Besides, the level of awareness among the public about the utility of birth/death certificate also plays a crucial role.

1.4 Vital statistics generated through registration records enable estimation of the size, structure and geographical distribution of the population for the current year except for migration. Vital statistics also enables the projections for future years on the basis of probable trends of fertility and mortality as derived from a study of these factors and their interactions with social, economic and other demographic factors. The vital statistics data generated through an effective Civil Registration System is of immense use for formulation of various development and welfare programmes/ schemes. Civil Registration data can act as

an objective source for allocation of financial resources at State and District level. The Civil Registration data acquires paramount importance in the wake of 73rd and 74th amendments to the constitution of India, as it can provide data at local level for micro level planning, monitoring and evaluation of schemes. At national level, the vital statistics data generated through Civil Registration is quite useful for medical research and in the study of sex ratio, mortality and morbidity rates and also in the study of causes of deaths.

Registration of births and deaths in India

1.5 In India, the registration of births and deaths is carried out under provisions of the Registration of Births and Deaths (RBD) Act, 1969. The registration is done by the local Registrar appointed by the State Government under whose jurisdiction the event has taken place.

1.6 Provision for registration of births and deaths and the mechanism thereof had been in existence in India for more than a century, however, the work of registration was carried out under various laws and byelaws existing at that time in different parts of the country. The need for improvement in the vital statistics system was felt for long time and, therefore, on recommendations of various committees and conferences, the Registration of Births & Deaths Act, 1969 providing for compulsory registration of births and deaths was enacted. Since then, this Act has been enforced uniformly across all the States and Union territories. This Act provides for registration of births and deaths and publication of statistical reports annually based on the civil registration data. The enactment of the Registration of Births & Deaths Act, 1969 has provided a common framework for putting in place a sound system of registration of births and deaths in the country.

1.7 The registration work at various levels in States/Union Territories is performed by involving officers of different Departments. The existing organizational set-up involved in the work of civil registration at various levels in different States/Union Territories is given at Annexure-A. A uni-linear hierarchy exists in 7 States/ UTs namely, Assam, Haryana, Meghalaya, Odisha, Sikkim, A&N Islands and Lakshadweep, where Health Department is involved at all levels of registration. Similarly, Panchayat in Kerala, Revenue in Dadra & Nagar Haveli and Local Administration Department in Puducherry are responsible for execution of this work at all levels. At present, Health Department supervises the civil registration work at State level in 20 States/Union Territories and Department of Planning, Economics & Statistics in 12 States/ Union territories.

1.8 In order to simplify and speed up the process of registration and to bring in uniformity in birth and death registration formats, the registration system was revamped in the year 2000. Under the revamped system, the procedure for registration of births and deaths was also modified to some extent and the forms redesigned. Most of the tables to be part of the Annual Report of the Chief Registrars based on registration of births and deaths data under revamped system would be based on the information of place of usual residence of mother in case of births and place of usual residence of the deceased in case of deaths. The revamped system became operational in 2000 in all States/Union Territories except Assam, Arunachal Pradesh, Gujarat, Haryana, Himachal Pradesh, Odisha, Punjab, Uttarakhand and Uttar Pradesh. It was implemented in Assam, Arunachal Pradesh and Odisha in 2001, Haryana in 2002, Himachal Pradesh, Uttarakhand and Uttar Pradesh in 2003 and Gujarat and Punjab in 2004.

Statistical Reports

1.9 System of Registration of Births and Deaths is constantly generating statistical information at the local level. The information contained in the Reporting Forms is consolidated for onward transmission to the Chief Registrar of a State/UT. Every Chief Registrar is required to submit an Annual Report on the Working of the Act and a Statistical Report to the State Government by the July and December respectively of the following year to which the report relates. The Chief Registrars are also required to send a copy of these Reports to the Registrar General, India, Govt. of India.

1.10 Based on the Annual Statistical Report prepared by the States, the Office of the Registrar General, India brings out annually a comprehensive statistical report entitled “Vital Statistics of India based on Civil Registration System”. This series of reports have been brought out since 1958. However, most of the States are not bringing out their Annual Statistical Reports in time, and this in turn, delays the publication of the corresponding national report. It has also been observed that many of the States do not include all the prescribed tables in their reports making the utility of the national report very limited. However, most of the States have sent the annual information on births and deaths registered up to 2009. This information is available for most of the Districts with rural- urban and sex wise break-up. Therefore, this report has been prepared by compiling this information. Keeping in view the importance and use of the data on registered births and deaths, this report provides the District-wise registered births and deaths along with infant deaths with sex-wise and rural-urban break-up of registered events for the year 2009.

CHAPTER II

Important observations on Working of the RBD Act Report for the Year 2009

1. Registration Machinery: There is wide variation in the registration machinery across the country. The Chief Registrars of births and deaths are from the Health Department in 17 States and 3 union territories, from Planning, Economics & Statistics Department in 10 States and 2 union territories and in 1 State and 2 union territories Chief Registrar are from the Department of Panchayat, Local Administration and Revenue Department respectively. The district level authorities are mainly divided among District Collectors/ District Magistrate (in 9 States and 1 UT), Chief Medical Officers/ District Medical and Health (11 States and 3 UTs), District Statistical/ Planning Officers (in 4 States and 1 UT) and others. At local level, the registration work is entrusted to the officials from the departments of Panchayat (15 States and 3 UTs), Health (7 States and 3 UTs), Revenue (3 States), Education (2 States) and Police (1 State and 1 UT). In this connection, it is worth to mention that up to 2003, the registration work in rural areas in Punjab and Madhya Pradesh was handled by the Police officials, however, in view of the general tendency among the people not to go to police stations for registration, and the persuasion of ORGI, the States of Madhya Pradesh and Punjab have switched over the registration work of rural areas from Police Department to Panchayat Department w.e.f. 01-01-2004. The Haryana Government has switched over the work from Police officials to Health Functionaries from 01-01-2005. The registration work in Chhattisgarh has been transferred from Police Department to Panchayat Department w.e.f. 01.01.2008. Now Police functionaries are involved in registration work only in the rural areas of Jammu & Kashmir and Chandigarh Union Territory.

2. Inter Departmental Coordination Committee Meetings: In order to resolve operational problems and to sort out the issues of mutual coordination among the various departments engaged in registration work and for effective implementation of the provisions of the Act. State Level Inter-Departmental Coordination Committees (IDCC) has been set up in all States / UTs. The State Governments are required to convene the meeting of such committees at least once in a year, to formulate the strategies for further improvements in civil Registration system of the state. However, it has been observed that most of the States are not convening such meetings on a regular basis. In 2009 such meetings were held only in 8 States/UTs namely Assam, Karnataka, Madhya Pradesh, Meghalaya, Rajasthan, Orissa, Uttar Pradesh and Uttarakhand. Such committees have also been set up at District level (DLCC) and even below the District level i.e. Mandal level and Taluk level in majority of the States. However, the information on regular convening of such meetings has not been provided by the majority of the States. As per the information, the States of Andhra Pradesh, Rajasthan, Himachal Pradesh, Karnataka, Madhya Pradesh, Tamil Nadu, Punjab, Uttarakhand and Nagaland have provided the information on convening of such meetings.

3. Registration of Births and Deaths occurring to Indian Citizens abroad: The event of births and deaths of Indian citizens occurring abroad are registered by the respective Indian Consulates under the Citizenship Act 1955. The Consulates are statutorily required under Rule 5 of Citizen's (Registration at Indian Consulates) Rules 1956 to send the annual returns of births and deaths of Indian Citizens to the ORGI. Such returns for the year 2009 were received from 44 missions, covering 8246 births and 1222 deaths. Out of

total birth registered at the various mission during 2009, Kuwait alone accounted for more than 44% births and Qatar accounted for 19% births. In case of total registered death for 2009 at various missions, Kuwait and Qatar accounted for 37% and 21% deaths respectively.

4. Annual report on the working of the RBD Act: The Chief Registrars are required to submit an Annual Report on the working of the RBD Act under section 4 (4) of the Act to the respective State Governments as well as to the ORGI. The statutory Annual Reports for the year 2009 were received from all States/UTs except Goa, Orissa and Tamil Nadu.

5. Inspections of registration units- Under Section 18 of the RBD Act a specific provision have been made for inspection of registration offices and examine the registers kept therein. An inspection of registration centers and registration records is important for both qualitative and quantitative improvement of registration. Regular inspections are required to be done by the office of the Chief Registrar and District Registrars in each States/ UTs. Such inspections could have been more meaningful, if organized and conducted periodically however, as per the information provided by the States, the inspection of registration centers in the States were sporadic and extremely inadequate in most of the States/UTs during 2009. The actual information in respect of number of units inspected is not provided by the majority of the States / UTs. The following States/ UTs have furnished the desired information, the details of which are given below:

Sl. No.	State	No. Of. Districts	No. of Rural Units Inspected	No. of Urban Units Inspected
1.	Bihar	24	535	52
2.	Chhattisgarh	10	68	42
3.	Haryana	12	57	--
4.	Karnataka	Not given	4218	--
5.	Madhya Pradesh	30	684	259
6.	Manipur	Not given	50	--
7.	Punjab	Not given	108	128

6. Penalties: Section 23 of the RBD Act provides for imposing penalties (not exceeding Rs. 50/) on defaulting institutions, Registrars and the individuals for non-registration, non-reporting and for negligence or refusal without reasonable cause to register any birth or death. In spite of these provisions, very few States have been reported to resort to penalties as a means to improve the functioning of the system. As per the information made available, only 3 States namely Rajasthan, Kerala, and Punjab have imposed such penalties during 2009. Maharashtra has also imposed fines for not sending the report. The details of which are given below:

Name of States / UTs	Year	Penalties imposed on	
1. Rajasthan	2009	49 Gram Sevak (Registrar of Births and Deaths)	1 Dev. Officer 1 Medical Officer
		No. of prosecutions	No of offences
2 .Kerala	2009	01(Rs.50/-)	324 (Rs. 6670/-)
		Amount collected from defaulter for non / late reporting (in Rs.)	
3. Punjab	2009	Rural	Rs. 74050/-
		Urban	Rs. 52902/-
4. Maharastra	2009	Fines charged from the Chief Officer of Lonal and Buldhana Municipal Council for not submitting the monthly returns.	

The States of Assam, Bihar, Chhattisgarh, Gujarat, Jammu & Kashmir, Manipur, Tripura, west Bengal, Lakshadweep and Puducherry have furnished the nil information in respect of imposing penalty. The other States has not given any input on this issue in the Act Report.

7. Training of Civil Registration Functionaries- The registration functionaries involved in CRS work at various levels are from different departments in most of the States/UTs. Almost all these functionaries perform registration work as an additional work along with their other work assigned to them by the respective department. Further, due to frequent transfers of Civil Registration Functionaries, there is a need to impart training at a regular interval to these officials on registration rules, procedures and practices framed under the provisions of the RBD Act and the corresponding State rules. The details of Training programme organized in States /UTs for the registration functionaries are summarized below:

Name of State	Number of Training Programmes	No. of Participants
1. Chhattisgarh	144	10494
2. Haryana	10	Not given
3. Karnataka	131	Not given
4. Madhya Pradesh	332	38,469
5. Mizoram	9	Not given
6. Rajasthan	55	Not given
7. Punjab	Not given	1059

During 2009-10, the financial assistance of Rs. 50 Lakh was given by the Office of the Registrar General, India among 16 States/UTs for conducting training programs to the registration functionaries.

CHAPTER – III

A BRIEF ANALYSIS OF DATA ON REGISTERED BIRTHS, DEATHS AND INFANT DEATHS

2.1. Births and deaths are the two most important vital events in the life of an individual and for the society as a whole. Based on the data collected under the Civil Registration System on registered births and deaths, this Chapter presents the trend in the level of registration, vital rates and other related indicators, at the State and National level. To get an idea as to the coverage of Civil Registration in the country, the data generated from the Civil Registration System has been compared with corresponding estimates thrown up by the Sample Registration System. However, while interpreting the two statistics it should be borne in mind that data under Civil Registration is based on place of occurrence and Sample Registration is by the place of usual residence of mother. It will not be out of place to mention that although the registration data continues to be deficient due to not reporting of the events for registration or not being registered, and also due to non-reporting of the registered events to the District Registrar's office in time by the local registration units, the silver lining is that the overall level of registration across the States / Union Territories (UTs) largely show an upward trend.

2.2 Statement 1 gives the number of registration units along with the level of reporting at the national level and across the States and Union Territories by rural and urban place of occurrence of the event in 2009. Level of reporting indicates how many registration units from those within a State / UT submitted monthly returns of registered births and deaths to the District Registrar's Office during the year. Expressed as percentage, it helps in reviewing the registration system and defining measures that would be necessary to improve registration levels across the country.

2.3. It may be seen from the Statement that nearly 81 per cent of the registration units at national level reported monthly returns of registered births and deaths to the District Registrar's Office during 2009. Such reporting level by rural and urban registration units is about 80% and 86% respectively. These figures exclude information from Arunachal Pradesh, Bihar, Jharkhand, Odisha, Tripura and Uttar Pradesh due to non receipt of returns.

2.4. Among the States, cent-per-cent level of reporting from both rural and urban areas has been reported from 7 States viz. Goa, Gujarat, Haryana, Himachal Pradesh, Kerala, Punjab and Sikkim. It is interesting and heartening to note that all Union Territories have had cent-per-cent level of reporting during the year 2009.

Statement 1: Number of registration units and level of reporting by place, India, States and UTs, 2009

Sl. No.	India / State / UT	Registration units (Number)			Level of reporting (%)		
		Total	Rural	Urban	Total	Rural	Urban

1993	12519182	3704881	2007	19469756	5804922
1994	12788061	3676353	2008	19993799	5638131
			2009	21292574	5677705

Notes:

1. The figures are based on the data made available by the States/UTs.
2. For the period 1981 to 2000, total registered births/deaths of States/Union Territories exclude data for Assam from 1981 to 1987 & 1990 to 1994, for Bihar from 1997 to 1999, for Kerala of 1983, for Meghalaya from 1984 to 1994, for Sikkim from 1982 to 1987 and of 1989, for Uttar Pradesh of 1983 and from 1996 to 2000, for Uttarakhand of 2000, for West Bengal of 1982 & 1985, for A&N Islands 1981 to 1982, from 1987 to 1988 and from 1991 to 1992 and for Lakshadweep of 1982.
3. In 2001, total registered births/deaths of States/Union Territories exclude data from Assam, Uttar Pradesh and Uttarakhand.
4. Total registered births and deaths of States/Union Territories does not include data for Uttarakhand from 2002 to 2003, Tripura for 2005 and 2007-2009.
5. The registered births/deaths have been taken from the Annual Reports of the Chief Registrars and in its absence from the data provided by the Chief Registrar's office.

2.7. Statement 2 reveals that there is an absolute increase in the number of registered births and deaths over the period 1981 - 2009. The number of registered births has gone up from 8.56 million in 1981 to 21.29 million in 2009 - an increase of 148%. Such increase in the number of registered deaths, from 2.71 million in 1981 to 5.68 million in 2009, is to the tune of 110%. However, disaggregated to reveal year to year change in the registered births and death, the pattern does not reveal a continuous increasing trend. Whereas, sizable decline in the number of registered births and deaths between two consecutive years is largely due to incomplete reporting by the local registration units of all registered events to the Districts Registrar's office, such increase may be due to special registration campaigns undertaken by the States / UTs. The decline in absolute number of registered deaths at the national level – from 5.80 million in 2007 to 5.64 million in 2008, was due to incomplete reporting from some of the major States namely, Andhra

Pradesh, Bihar, Chhattisgarh, Jammu & Kashmir and Uttar Pradesh. Chart 1 and 2 present the number of registered births and deaths from 1981 to 2009.

2.8. The number of registered births, deaths and infant deaths for States and Union Territories for the period from 2000-2009 are presented in Statement 3, 4 and 5 respectively.

Statement 3: Number of registered births by States/ Union Territories, 2000-2009

Sl. No.	India/ State/ Union Territory	Number of registered births

2.9. Sex-wise Distribution of Registered Vital Events

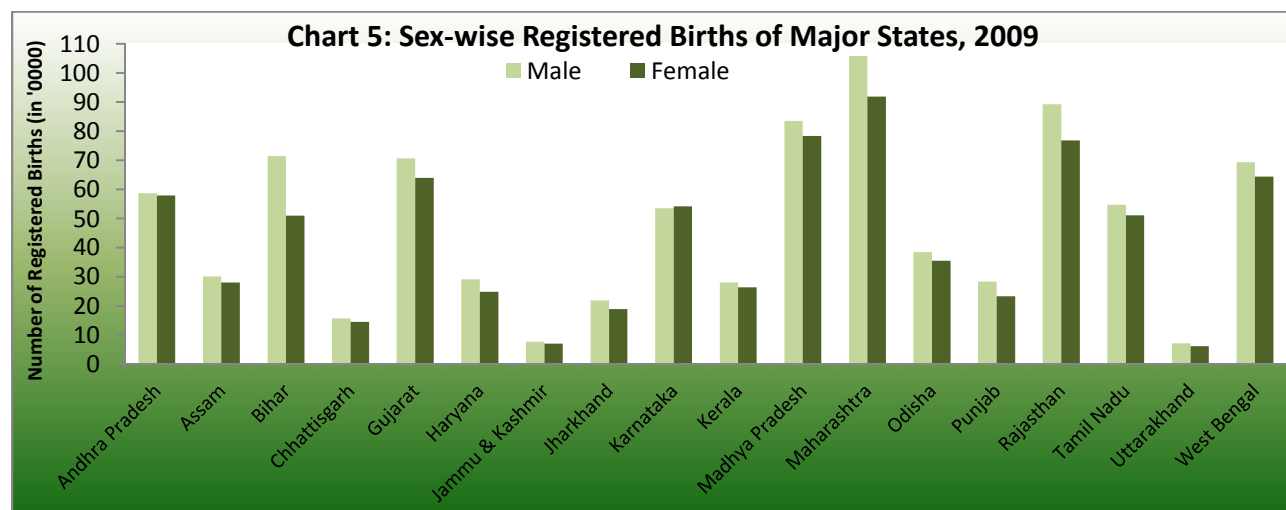

Chart 3 on sex wise distribution of registered births reveal that share of female registered births is about 6 per cent short of registered male births. The figures exclude Uttar Pradesh due to non-receipt of information on gender wise registered births during 2009.

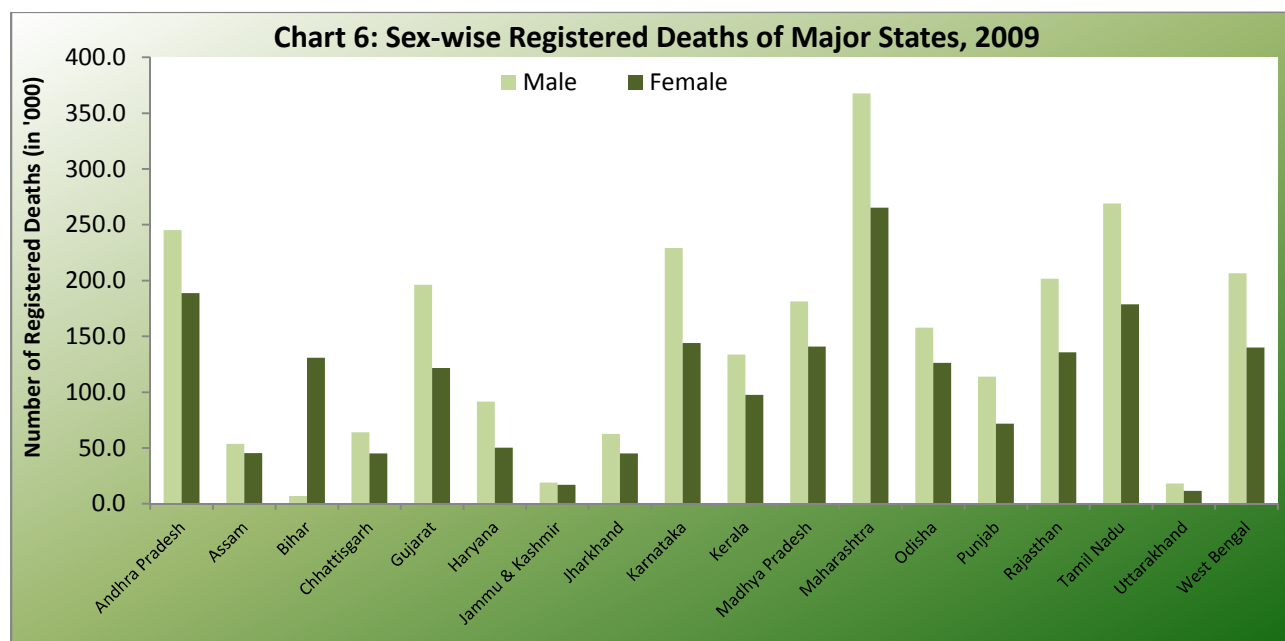

On the other hand, in case of death registration, the chart 4 shows the share of male registration is about 14 per cent more than female. These figures have been arrived after excluding the incomplete figure of Uttar Pradesh.

Sex-wise Distribution of Registered Vital Events of Major States

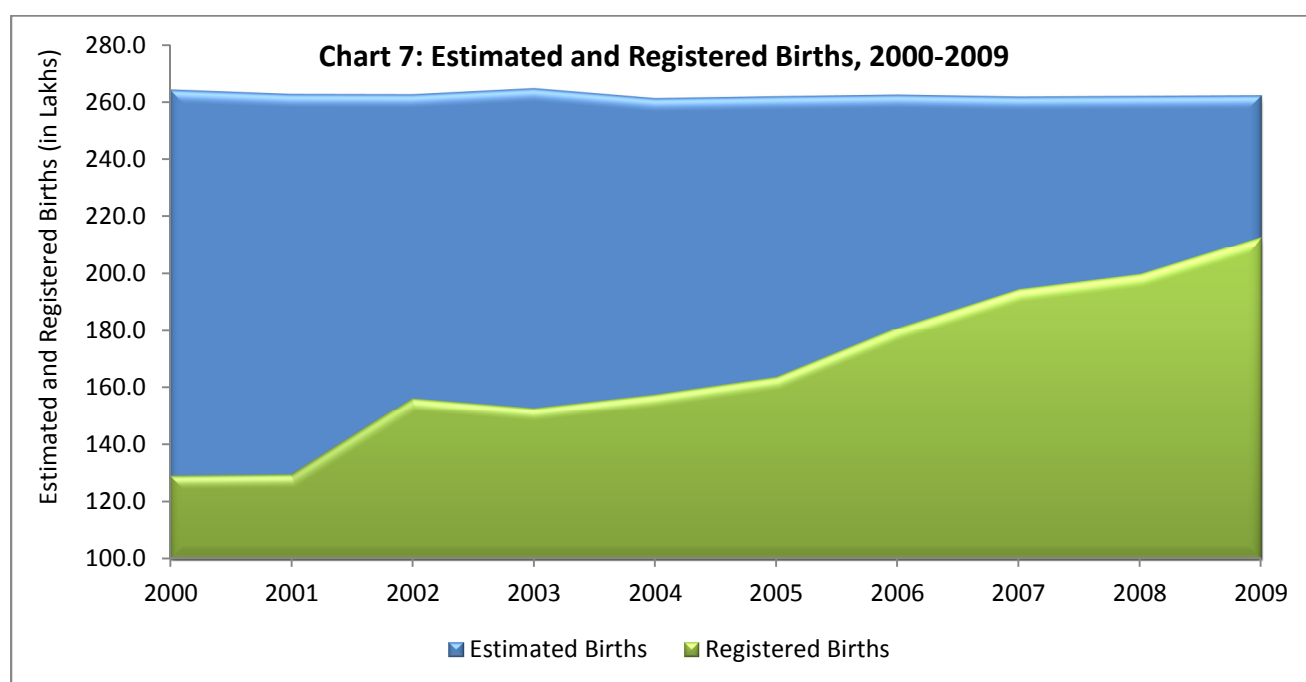

2.9.1 Chart 5 and 6 respectively shows the sex-wise distribution of registered births and deaths for the major States. Sex-wise distribution of birth reveals that the share of male registration is more than the female in almost all major States other than Karnataka. Similar pattern can also be seen in case of death registration. Huge difference in male-female death registration has been observed in Bihar due to non-reporting of male registered figures by the districts of the State especially in urban areas.

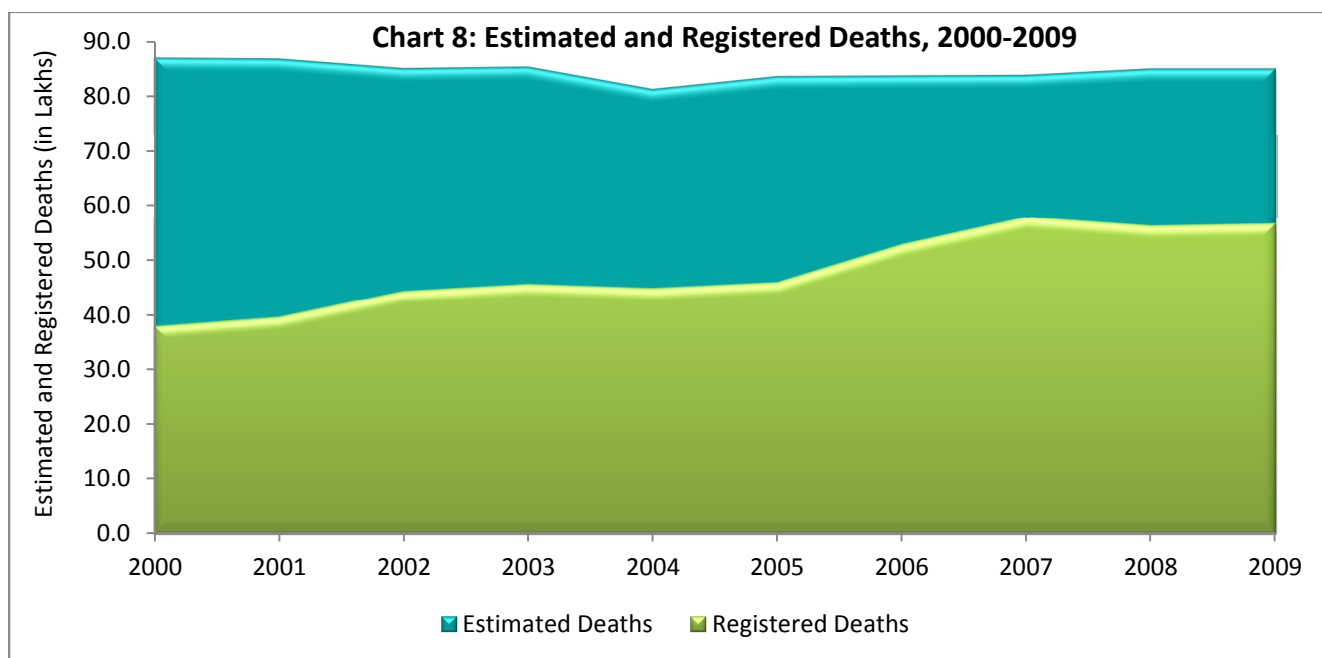

Distribution of registered births and deaths vis-a-vis estimated births and deaths for the period 2000-2009

The time series data on registered births and deaths for the years 2000 to 2009 reveals a significant long-term growth in the area covered by the registered events as compared to estimated events. In case of death registration, this share has been reduced during 2008-2009 as compared to 2007 due to less reporting of registered death events from some of the major States. Birth registration has crossed the level of 80 percent during 2009 which is good indication for the system of Civil Registration.

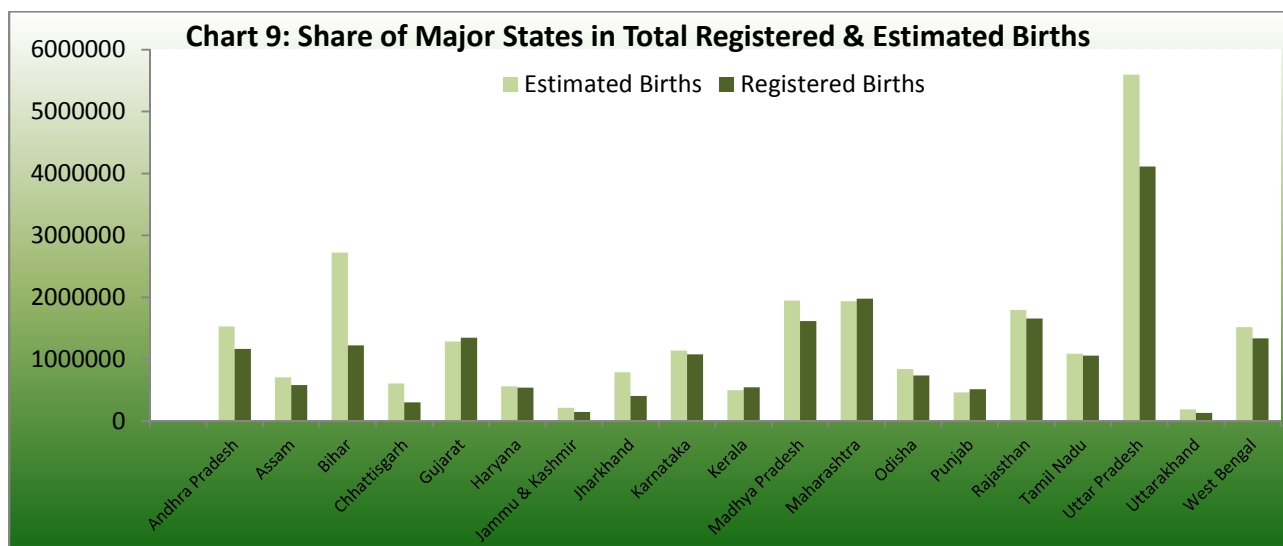

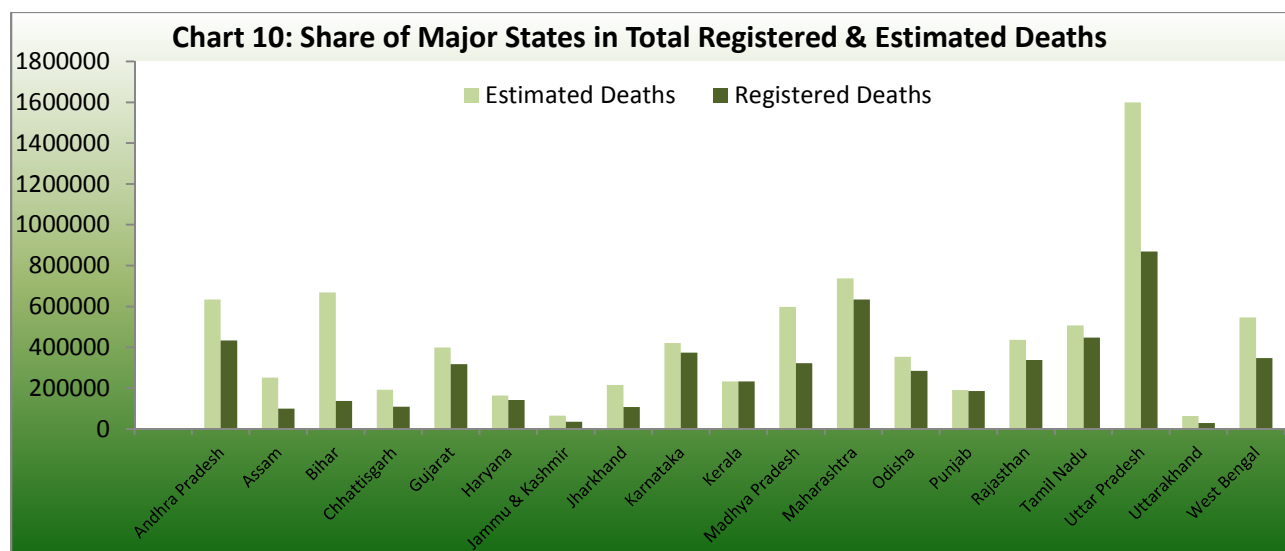

Distribution of estimated and registered events in Major States

In the analysis, the States having population less than one million have not been taken into consideration. On comparison of estimated and registered births, it is found that there is significant gap in estimated and registered births in Bihar, Uttar Pradesh and Andhra Pradesh. The States of Gujarat, Kerala and Maharashtra have registered births more than estimated births. This may be partly due to better medical facilities available in these States as compared to neighboring States.

On comparison of estimated and registered deaths, it is found that there is significant gap in estimated and registered deaths in Bihar, Uttar Pradesh, Madhya Pradesh and West Bengal. Death registration in States such as Assam, Bihar, Jharkhand, Chhattisgarh, Uttarakhand need to improve. Chart 7 and 8 shows the distribution of estimated and registered births and deaths respectively in major States.

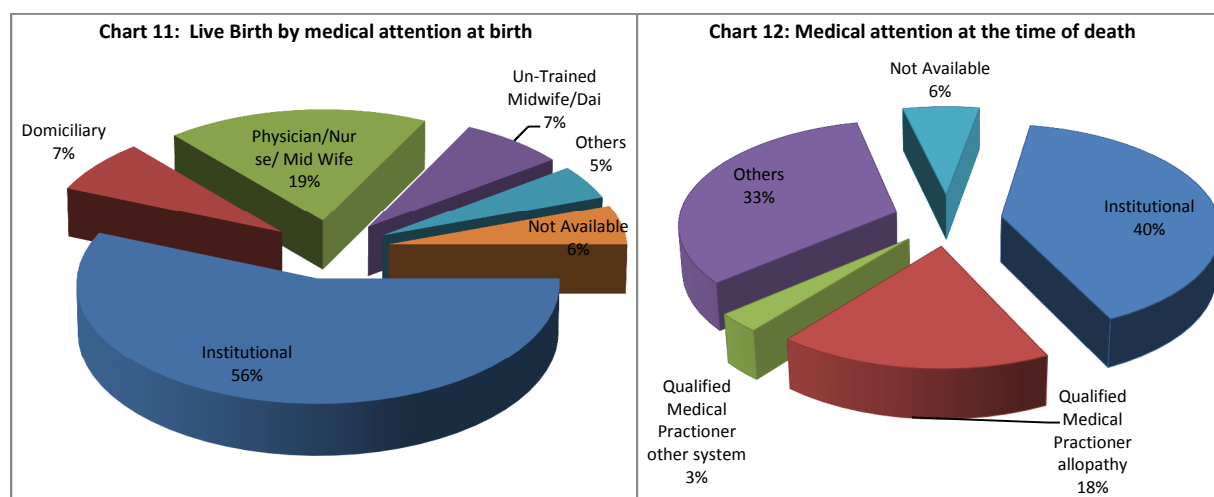

Medical attention received at the time of birth and death

The data on live birth by type of medical attention received at the time of delivery has been reported from 21 States/UTs and the combined distribution of medical attention received at the time of birth of these States/UTs has been presented in Chart 11. Chart 11 shows that majority of live births have been occurred in an institution, either in Government or private hospitals. Institutional births occurred in 56% of cases and 44% of registered births were non-institutional in the year 2009. Of the non-institutional births, 19% were attended by Physicians/Nurse/Mid-wife. In spite of having enough better medical facilities about 7% of the events are still attended by untrained Mid-wife/Dai/others.

Chart 12 represents the distribution of medical attention, received by the deceased at the time of death on the basis of data received from 21 States/UTs, It is evident from Chart 12 that 40% of the total registered deaths have occurred in institutions which is on a higher side than that of other places from where the deceased had received medical attention. 18% of registered deaths receive medical attention from qualified allopathic professionals. 33% of deceased did not receive any medical attention at the time of death.

Infant Deaths

Statement 6 presents the infant deaths registered by place of occurrence (Rural /Urban) of the event for the year 2009 and it may be observed that share of rural area is only 38.2% and urban area is 61.8% in total infant deaths registered. The registration of infant deaths in rural area is a cause of concern.² States namely Jharkhand and Tripura have not submitted the returns on registered infant deaths for the year 2009. Therefore, the analysis is based on the figures of 33 States/UTs only. Share of infant deaths to total registered deaths is more in urban area as compared to rural area. Statement 7 gives the percentage distribution of sex wise infant deaths which shows that female infants experienced higher mortality than male infants.

Statement 6: Percentage distribution of registered infant deaths by place of occurrence, 2009

Place of occurrence	No. of Registered Deaths	No. of Registered Infant Deaths	% share of registered of Infant Deaths by place of occurrence	% of Registered Infant deaths to total registered deaths
Rural	3456055	69206	38.3	2.0
Urban	2221650	111659	61.7	5.0
Total	5677705	180865	100.0	3.2

Statement 7: Percentage distribution of infant deaths by sex, 2009

Sex	No. of Registered Deaths	No. of Registered Infant Deaths	% of Infant deaths to total registered deaths
Male	2761955	84963	3.1
Female	2046701	72929	3.6
Person*	5677705	180865	3.2

*: Includes the cases of sex not reported, so does not match with the addition of male and female.

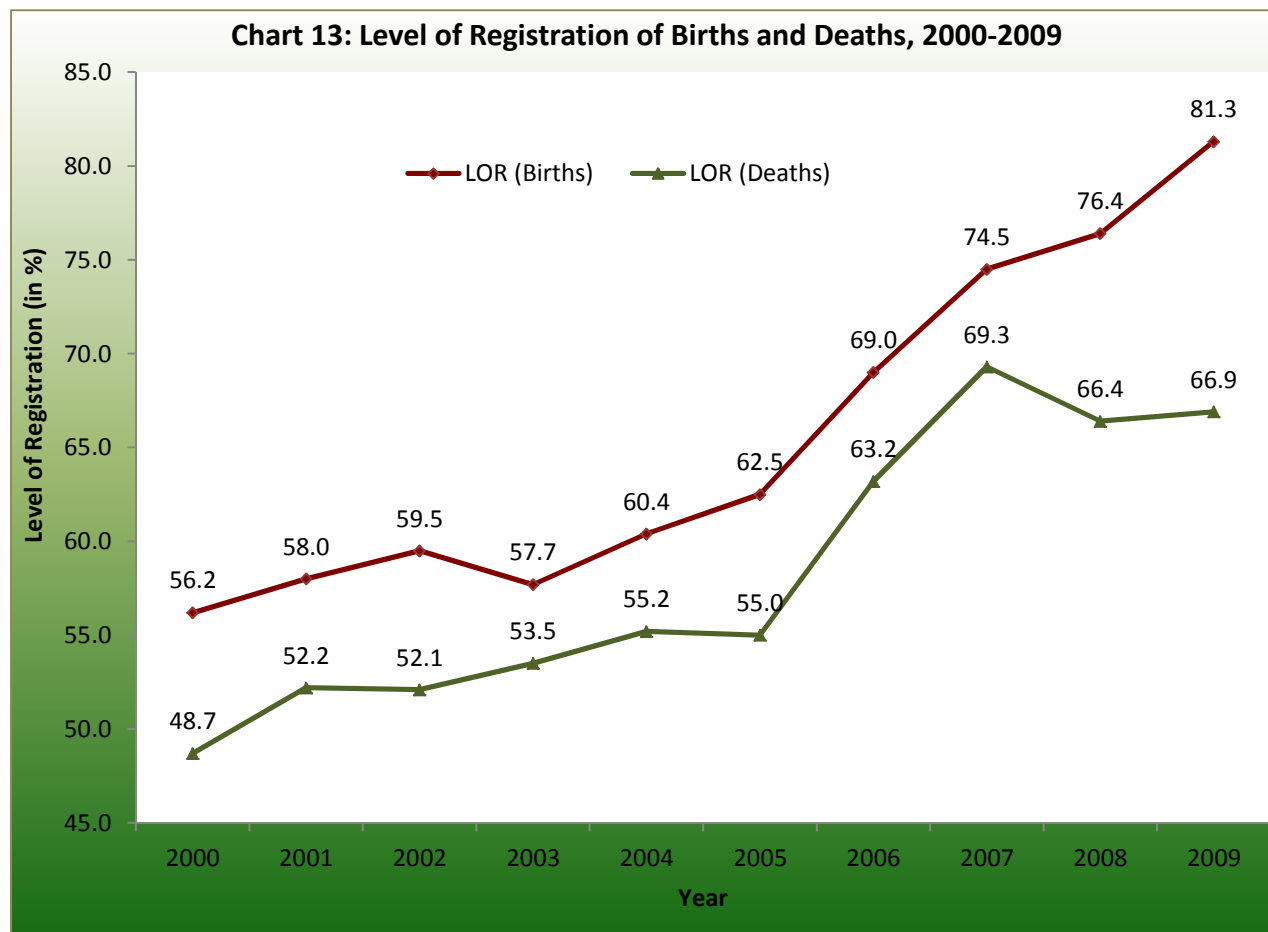

3. Analysis and Findings

3.1. Level of Registration (LOR)

3.1.1. The level of registration, defined as the percentage of registered births/deaths to the births/deaths estimated through SRS, determines the performance level of a State / Union territory. In the absence of reliable estimates of number of births and deaths on a year to year basis from any other source, the number of events as revealed from SRS is used to calculate the level of registration. The level of registration so calculated is very high for some of the smaller States/Union Territories either due to the lower estimates of vital events than the actual and / or due to the fact that SRS estimates of vital events are based on the place of usual residence while events are registered at the place of occurrence irrespective of the place of residence.

3.1.2. In the absence of number of registered events of Tripura, the same for the year 2006 has been used for the calculation of level of registration for the year 2009. This has been done to ensure that the level of registration for the country as a whole for the year 2009 is not devoid of level of registration for this State.

3.1.3. The levels of registration of births and deaths for India and States/UTs for the period 2000 to 2009 are presented in Statements 8 and 9 respectively. The level of registration of births has increased to 81.3 percent in 2009 from 76.4 percent in 2008. The level of registration of deaths has also increased to 66.9 percent in 2009 from 66.4 percent during the corresponding period. Chart 13 depicts the trend of level of registration of births and deaths from 2000 to 2009. The level of registration for births has recorded sharp exponential increase after 2005. However, the existing gap of about 19 percent in case of registration of births and about 33 percent for registration of deaths at all India level remains a cause of concern. In order to universalize the registration of events, a mission mode approach is required particularly in the poor performing States.

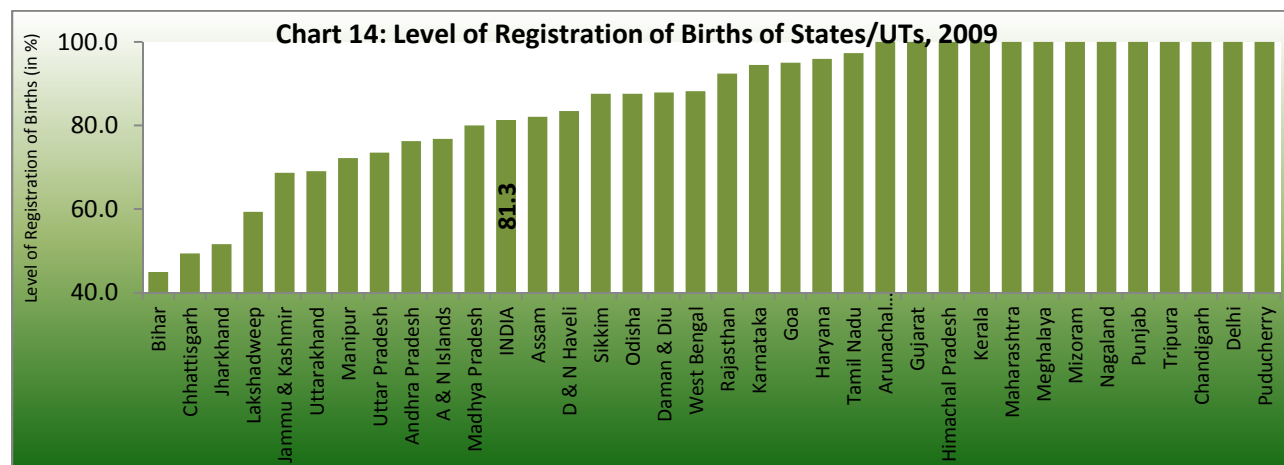

Statement 8: Level of Registration of Births, 2000-2009

Note: n.c. – not calculated and n.a. – not available

3.1.4. Statement 8 reveals that the States/UTs continue to function at different levels of registration efficiency during 2000-2009. The level of registration of births in the country is highly erratic even after more than 40 years of enactment of the Registration of Births and Deaths Act, 1969. The States/UTs of Arunachal Pradesh, Gujarat, Himachal Pradesh, Kerala, Maharashtra, Meghalaya, Mizoram, Nagaland, Punjab, Chandigarh, Delhi and Puducherry have recorded cent percent registration of births in 2009.

3.1.5 Tripura, for which the figures of 2006 on registered birth have been used for calculating LOR for the year due to non-receipt of return on registered events from the State, has attained the cent per cent level of registration of births due to downfall in SRS birth rate during 2009. The States/UTs of Kerala, Mizoram, Chandigarh, Delhi and Puducherry have maintained the cent percent level of registration of births since 2000. There is no change in the number of States/UTs who are in the category of cent percent registration of births in 2009 as compared to 2008. Chart 14 portrays the level of registration of births for India and States/UTs for the year 2009.

3.1.6. Statement 9 shows that the level of registration of deaths in the country also continues to be fluctuating. In 2009, Goa, Mizoram and Tamil Nadu are the only States recording cent percent registration of deaths followed by the States of Kerala, Punjab and Sikkim reporting more than 90 percent registration of deaths. The Union Territories of Chandigarh, Delhi and Puducherry have maintained cent percent level of registration of deaths since 2000. The number of States/UTs has increased in the category of cent percent registration of deaths in 2009 as compared to 2008. Chart 15 depicts the level of registration of deaths for India and States/UTs for the years 2009.

Statement 9: Level of Registration of Deaths, 2000-2009

Sl. No.	India/ States/ UTs	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009

Note: n.c. – not calculated and n.a. – not available

3.1.7. Statement10 presents the distribution of major States (with population 10 million and above as per result of 2011 Census) by their level of registration of births and deaths. The major States have been categorized into 5 groups as per their level of registration of births and deaths for the year 2008 and 2009.

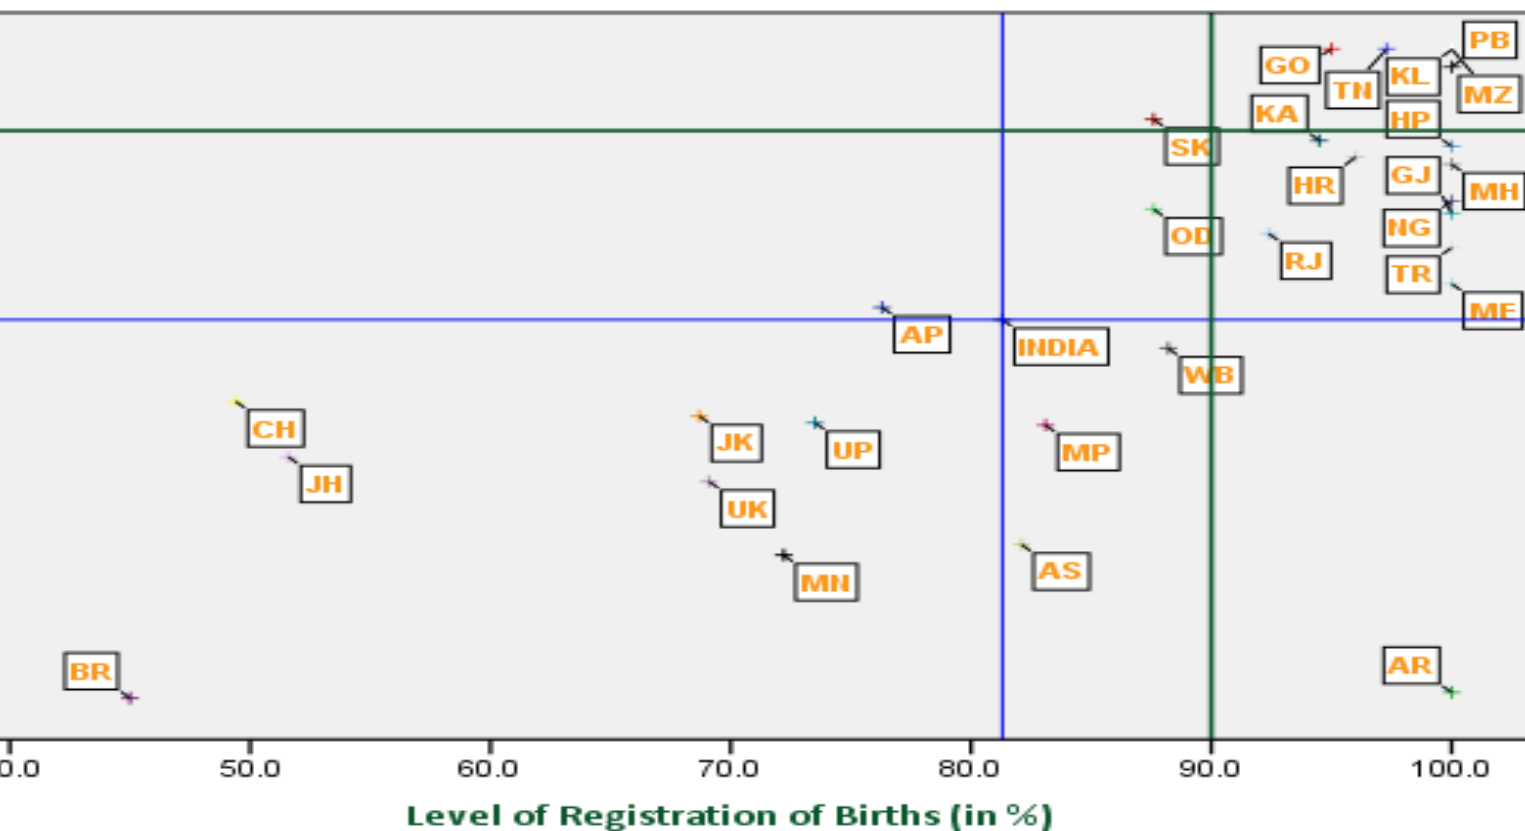

Statement10: Major States (Population above 10 million as per Result of 2011 Census) classified by their level of registration, 2008 and 2009

Level of Registration	2008		2009	
	Births	Deaths	Births	Deaths
Above 90	8 States (Gujarat, Haryana, Karnataka, Kerala, Maharashtra)	2 States (Kerala and Punjab)	8 States (Gujarat, Haryana, Karnataka, Kerala, Maharashtra, Punjab, Rajasthan and Tamil Nadu)	3 States (Kerala, Punjab and Tamil Nadu)
80-90	3 States (Madhya Pradesh, Odisha and Rajasthan)	4 States (Haryana, Karnataka, Maharashtra and Tamil Nadu)	4 States (Assam, Madhya Pradesh, Odisha and West Bengal)	4 States (Haryana, Karnataka, Maharashtra and Odisha)
50-80	6 States (Andhra Pradesh, Assam, Jammu & Kashmir, Jharkhand, Uttarakhand and Uttar Pradesh)	9 States (Andhra Pradesh, Chhattisgarh, Gujarat, Jammu & Kashmir, Madhya Pradesh, Odisha, Rajasthan, Uttar Pradesh and West Bengal)	5 States (Andhra Pradesh, Jammu & Kashmir, Jharkhand, Uttarakhand and Uttar Pradesh)	9 States (Andhra Pradesh, Chhattisgarh, Gujarat, Jammu & Kashmir, Jharkhand, Madhya Pradesh, Rajasthan, Uttar Pradesh and West Bengal)
25-50	2 States (Bihar and Chhattisgarh)	3 States (Assam, Jharkhand and Uttarakhand)	2 States (Bihar and Chhattisgarh)	2 States (Assam and Uttarakhand)
Below 25	NIL	1 State (Bihar)	NIL	1 State (Bihar)

3.1.8. Kerala and Punjab are the only two major States recording more than 90 percent of registered births as well as deaths both in 2008 and 2009. Bihar is the only State in case of death registration in the lowest category during both the years. Tamil Nadu has moved by one category in case of death registration from 80-90 category.

3.1.9. The level of registration of births and deaths for the year 2009 for India and States/UTs has together been mapped in the Chart 17. The rectangle on the top right corner is the expected target towards achieving the cent percent registration and status of each States is depicted in the Chart 17.

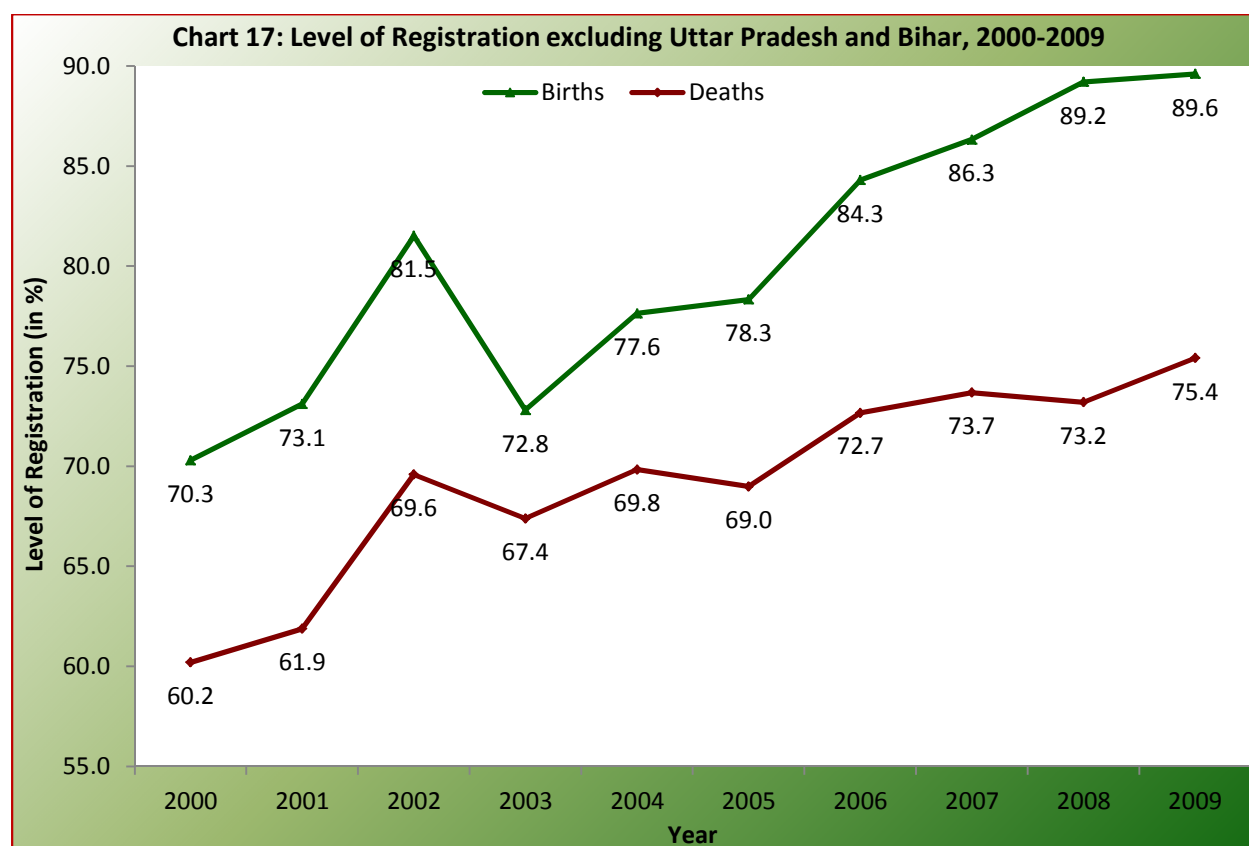

Chart 16: Level of Registration of Births and Deaths, 2009

sh (AP), Arunachal Pradesh (AR), Assam (AS), Bihar (BR), Chhattisgarh (CH), Goa (GO), Gujarat (GJ), Himachal Pradesh (HP), Jammu & Kashmir (JK), Jharkhand (JH), Karnataka (KA), Kerala (KL), Madhya Pradesh (MP), Maharashtra (MH), Manipur (MN), Meghalaya (ME), Mizoram (MZ), Nagaland (NG), Odisha (OD), Punjab (PB), Rajasthan (RJ), Sikkim (SK), Tamil Nadu (TN), Tripura (TR), Uttar Pradesh (UP), Uttarakhnd (UK), West Bengal (WB)

3.2. Level of Registration after excluding Uttar Pradesh and Bihar

3.2.1. In order to quantify the impact of Bihar and Uttar Pradesh, which are performing abysmally poor for last so many years, the level registration for the country excluding these two States have been worked out and mapped in Chart 17 from 2000 onwards. These two States even after showing marginal improvement in functioning of Civil Registration during last several years still suppresses the national figure for registration of both births and deaths by around 8 per cent.

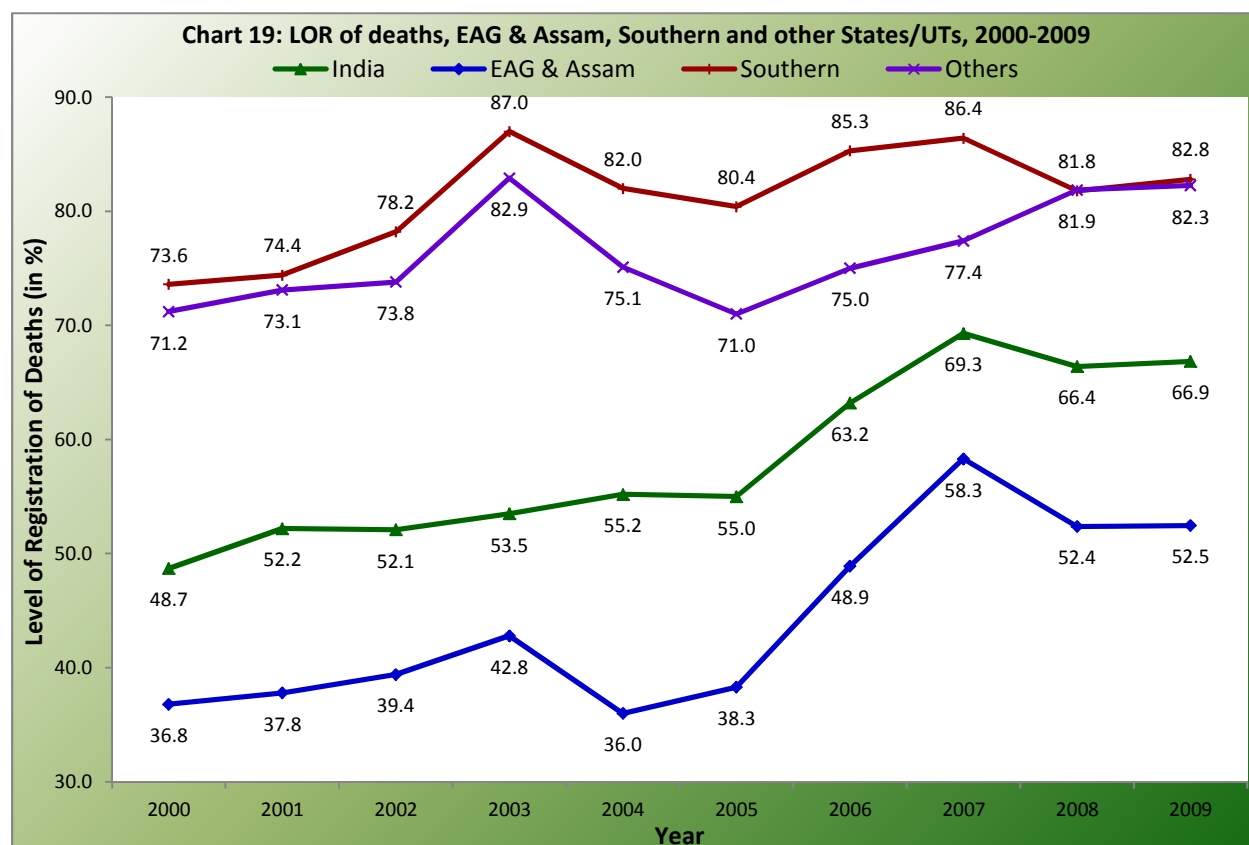

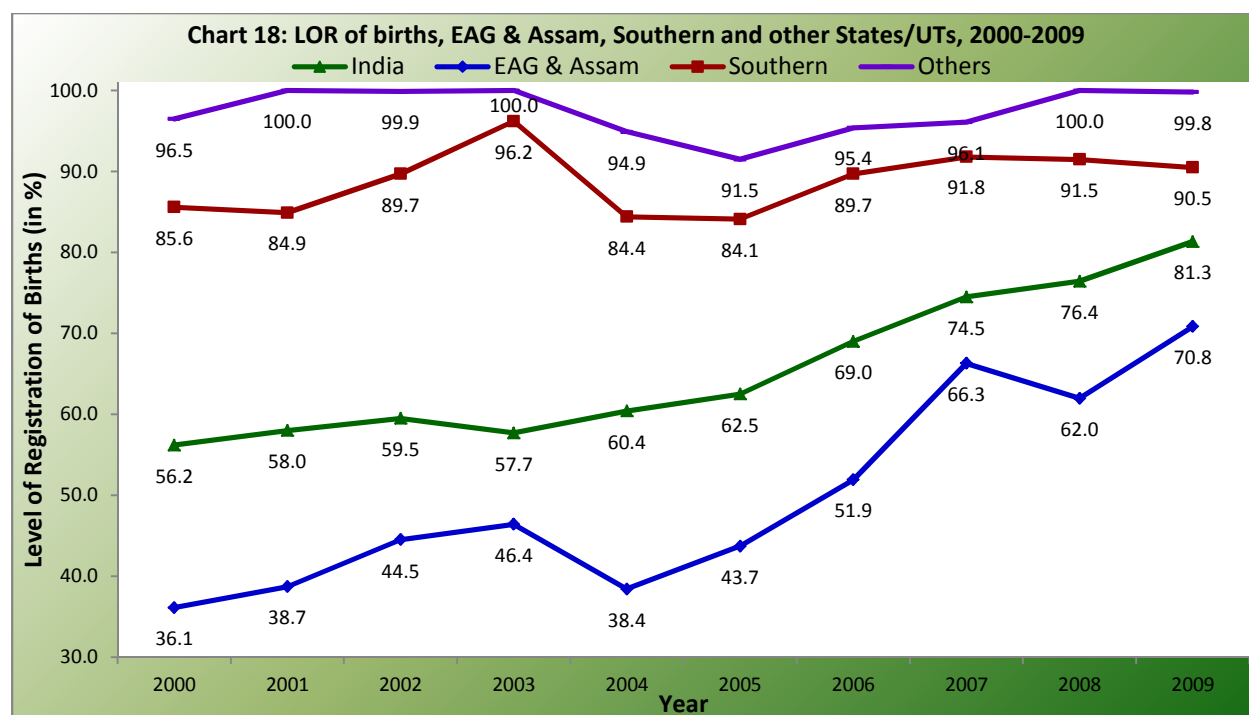

3.3. Comparison of level of registration of births and deaths in EAG & Assam, Southern States and Other States/UTs

3.3.1. In order to highlight the gap in the demographic profile of i) Empowered Action Group (EAG) States & Assam, ii) Southern States and iii) other States/UTs, the level of registration for births and deaths (two important indicators describing the demographic progress) has been worked out and shown in the charts 18 and 19 respectively.

3.3.2. The compositions of these three groups in terms of States/UTs are as under:

- EAG States: Bihar, Jharkhand, Madhya Pradesh, Chhattisgarh, Odisha, Rajasthan, Uttar Pradesh and Uttarakhand. Assam has also been added to this group.
- Southern States: Andhra Pradesh, Karnataka, Kerala and Tamil Nadu.
- Other States/UTs: This category covers all the remaining States and UTs.

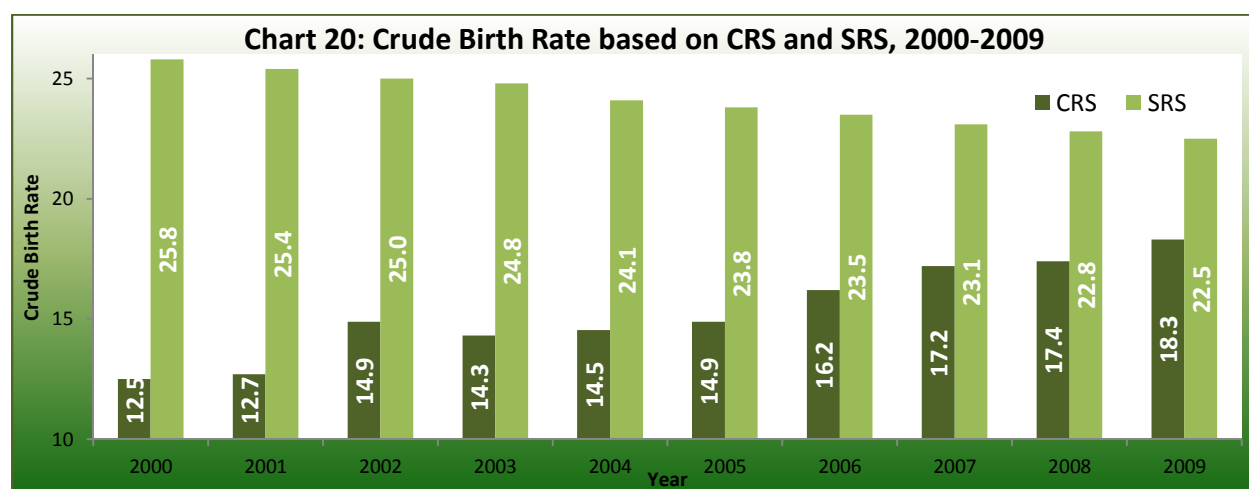

3.3.3. It can be seen that the level of registration of births for other States/UTs is higher than that of Southern as well as EAG States& Assam persistently over the period. This perhaps is due to low level of registration of births in Andhra Pradesh and to some extent in Karnataka.

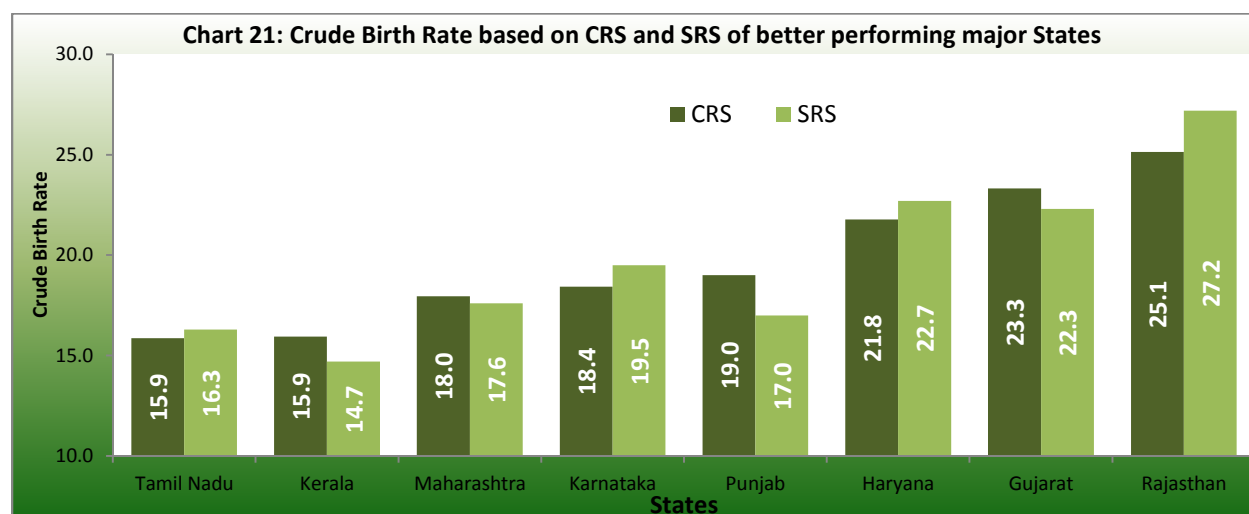

3.4. Crude Birth Rate

3.4.1. The Crude Birth Rate (CBR) is the annual number of live births per thousand populations and is a ratio. The numerator is the number of live births registered during the year and the denominator is the midyear population for the same period.

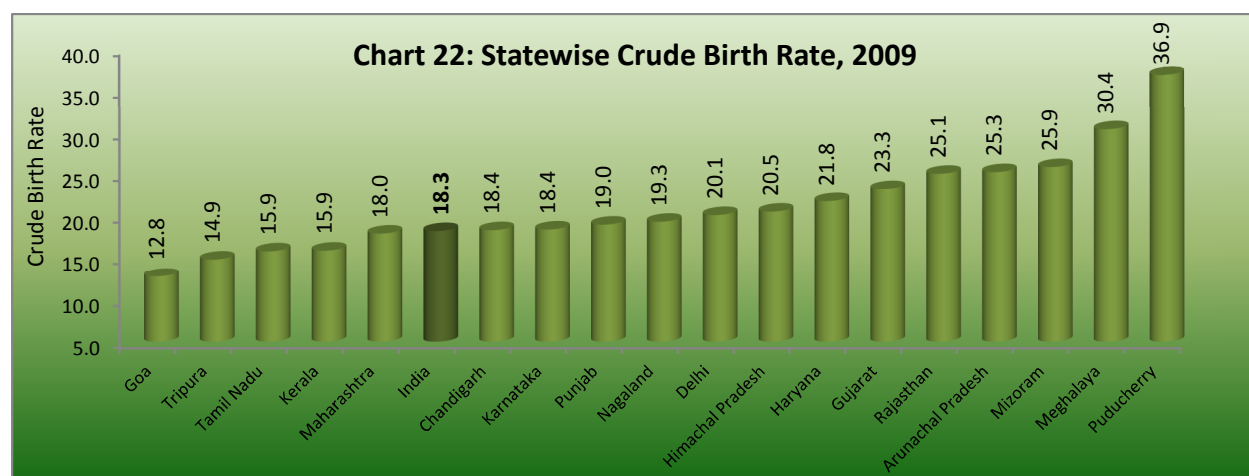

3.4.2. Crude Birth Rate based on CRS data is compared with the CBR estimated from SRS to evaluate the completeness of Civil Registration System despite the difference in method of data collection. The birth data in CRS is based on the place of occurrence of event whereas in SRS, it is based on the place of usual residence of the mother. A comparative picture of CBRs based on CRS and SRS for the period 2000 to 2009 has been depicted in the Chart 20.

3.4.2. It can be seen from the above chart that gap between the birth rates based on CRS and SRS is narrowing down over the years which is a good indication of improvement in the functioning of CRS. The situation further improves if a comparison is made between the birth rates based on CRS and SRS for the States recording more than 90 per cent level of registration of births. To illustrate this, such a comparison has been done for few States as shown in Chart 21. It can be seen from the chart that the birth rates at State level are in close proximity.

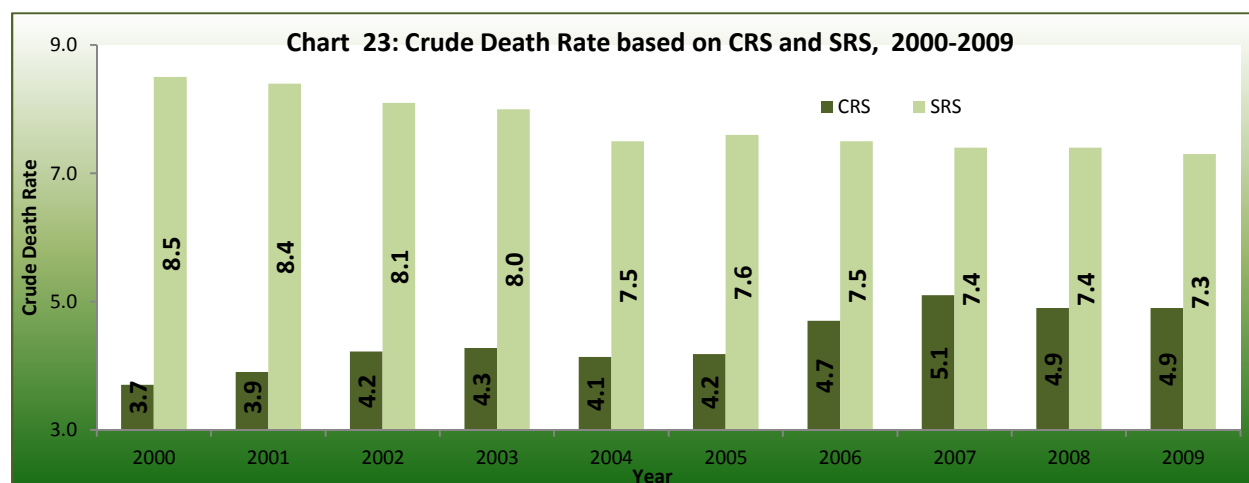

3.4.3. The Crude Birth Rates for the year 2009 for India and States/UTs where level of registration of birth is more than 90% are presented in Chart 22. Among these States/UTs, Puducherry has recorded the highest birth rate which is due to the fact that substantial number of births are occurring to the mothers who are not the usual residents of the UT and might have visited to avail better medical facilities available in Puducherry. As per the Annual Statistical Report of the UT, 50.53% of the mothers are not the usual resident of the UT. Lakshadweep followed by Manipur has recorded the lowest birth rate during the year among all States/UTs.

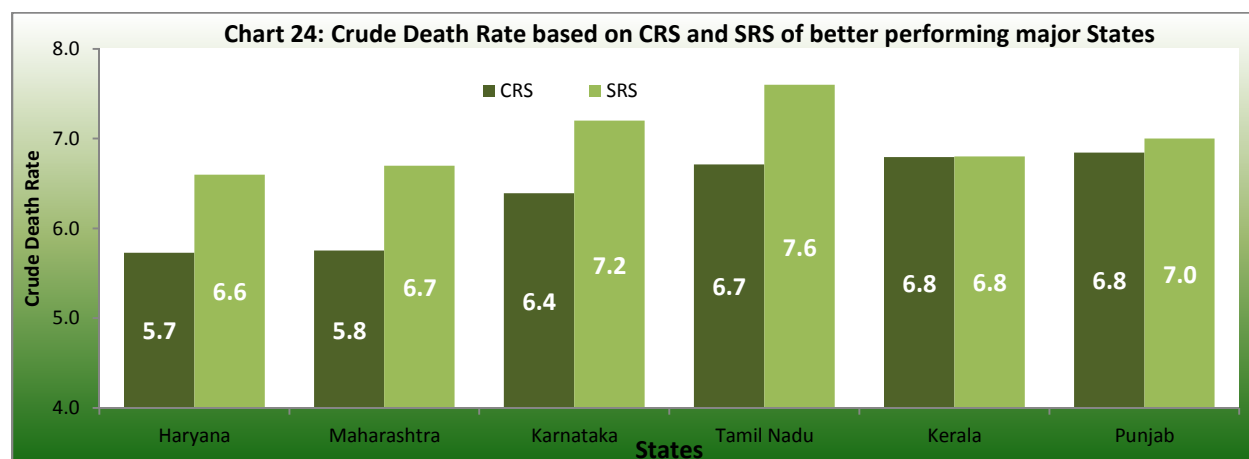

3.5. Crude Death Rates

3.5.1. Crude death rate is the mortality expressed as a proportion of the population. The crude death rate is defined as the ratio of the number of deaths during the year to the midyear population in that year; the value is expressed per thousand population.

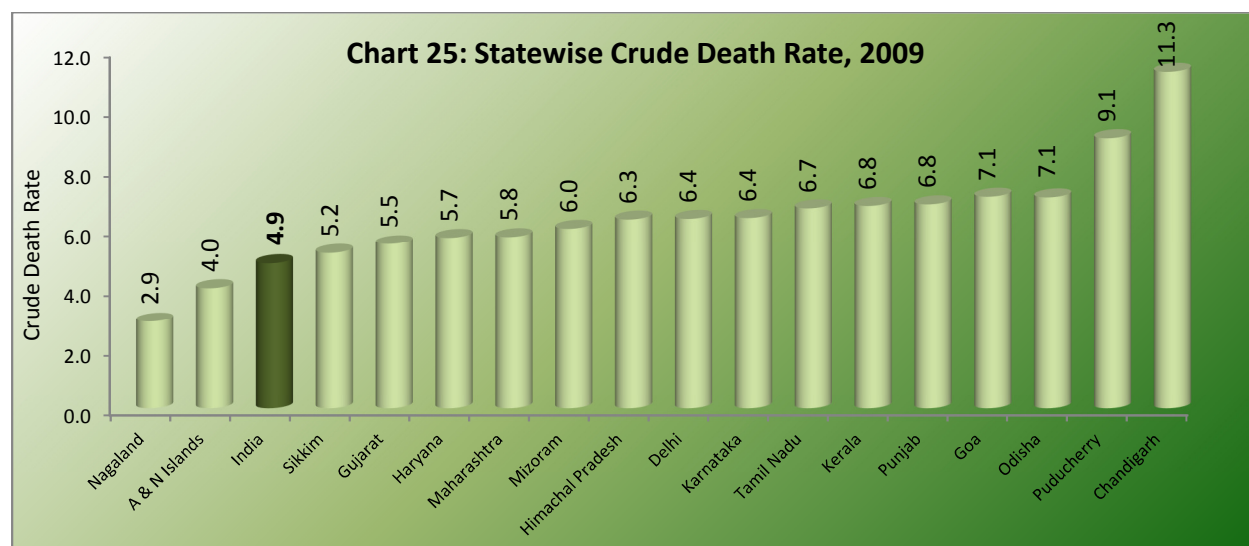

3.5.2. Crude Death Rate (CDR) based on CRS data is compared with the CDR estimated from SRS to evaluate the completeness of Civil Registration System despite the difference in method of data collection. The death data in CRS is based on the place of occurrence of event whereas in SRS, it is based on the place of usual residence of the deceased. A comparative picture of CDRs based on CRS and SRS has been depicted in the Chart 23.

3.5.2. It may be seen from Chart23 that gap between death rates based on CRS and SRS during 2009 has narrowed down which is a good indication of improvement in the functioning of CRS. The situation further improves if death rates based on CRS and SRS for the better performing States recording more than 85 per cent level of registration of deaths are compared. To illustrate this, such a comparison has been done for few States as shown in Chart24 for 2009. It may be seen that the death rates are in close proximity in these States.

3.5.3. The crude death rates for the year 2009 for India and States/UTs where level of registration of birth is more than 80% are presented in Chart 25. Among these States/UTs, Chandigarh has reported the highest CDR during the year. This may be due to the fact that substantial number of deaths may be occurring to outsiders who visit these places to avail better medical facilities. Arunachal Pradesh has reported the lowest CDR during the year 2009 among all States/UTs and among the major States, Bihar has recorded the lowest CDR for the year under reference which is due to poor netting of events.

3.5.4. Statement 11 presents the comparative picture of crude birth and death rates based on the data from CRS and SRS of the States/UTs for year 2009. It may be seen from the Statement 11 that the birth and death rate for the country as a whole based on CRS data is about 4 per cent and 2 per cent higher than that of corresponding rates based on SRS data. In view of the gap of about 19 per cent in registration of births and about 33 per cent in registration of deaths at National level, the rates derived

from CRS data is not comparable with the rates based on SRS data for the country as a whole. However, it can be observed in the States, where the level of registration of vital events is quite good during 2009, the crude birth rates based on registered events are close to the respective estimates based on SRS in respect of the States of Goa, Gujarat, Haryana, Karnataka, Kerala, Maharashtra and Tamil Nadu. There are significant differences in majority of the States in the death rates based on CRS and SRS which is due to low level of registration of deaths.

Statement 11: Crude Birth & Death Rates based on CRS & SRS and LOR- States/Union Territories, 2009

n.a. – not available

3.5.5. This suggests that in the States where LOR is high, the data on registered events could also be used to analyse the inter-district variation in crude birth and death rates. In the remaining States, there are measurable gaps in the birth and death rates based on CRS and SRS and a lot more efforts are required to bridge the same.

3.6 Infant Mortality Rates

3.6.1. The Infant Mortality Rate (IMR) is defined as the ratio of the number of deaths of children under one year of age to the number of live births in the reference year, the value is expressed per thousand live births.

3.6.2. Unlike Crude birth and death rates, the Infant Mortality Rate (IMR) for the country based on CRS data over the years is exhibiting a declining trend. Chart 26 depicts the IMR based on CRS data for the year 2000 onwards. The declining coverage of infant deaths under CRS also gets corroborated from perceptible fall in the percentage of infant deaths to the total registered deaths for the years 2000 to 2009 as shown in Chart 27.

3.7. Sex Ratio at Birth

3.7.1. The Sex Ratio (Number of females per thousand males) at birth is an important indicator to map the sex differential of the population at the beginning of their life. The sex ratio at birth has been calculated for different States/UTs for the year 2000 to 2009 and shown in the Statement12.

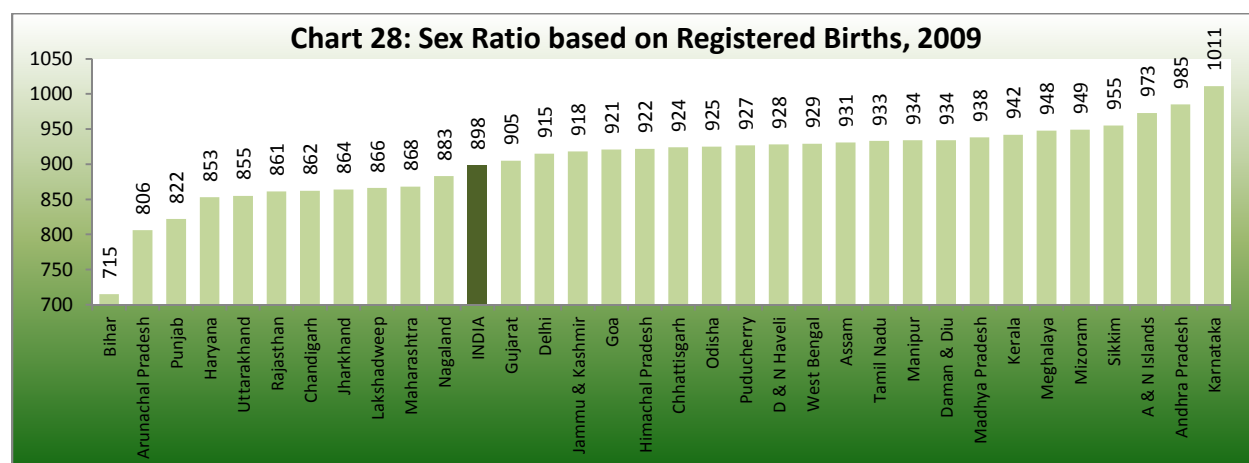

Statement 12: Sex Ratio at Birth based on registered events, 2000-2009

Note: n.a. – not available; n.r. – not reported.

3.7.2. It can be seen from the statement 11 that the Sex Ratio at Birth based on registered events of Karnataka has shown the highest and Bihar has shown the lowest during 2009. The sex ratio at birth at national level is 893. The Sex Ratio at birth for the country ranges from 868 to 904 over these years. A downfall in the sex ratio at birth has been observed during 2009 which is due to less reporting of female registered births from the States of Bihar, Jharkhand and Odisha. The sex ratio at birth has shown noticeable improvements in the States of Assam, Chhattisgarh, Nagaland and Rajasthan in 2009 as compared to 2008. Karnataka has the distinction of being the only major state reporting favorable sex ratio at birth in last so many years.

3.7.3. The sex ratio at birth could not be worked out for the states of Madhya Pradesh, Tripura and Uttar Pradesh for want of sex-wise disaggregated data on registered births for the year 2009. Non-reporting of gender-wise break up of registered events is another area where urgent attention is required.

3.7.4 In order to evaluate the performance of Civil Registration System on this front also, a comparison of sex ratio at birth based on registered births with that of from SRS by taking three years simple moving average for the years 2000-2008 has been done and the same is shown in Chart 29.

3.7.5. It can be seen from the above graph that the gap at the national level has been narrowing down over these years. However, based on three years moving average it would take few more years under the Civil Registration System to bridge the gap.
