

SAMPLE REGISTRATION SYSTEM BULLETIN

PUBLISHED BIENNUELY IN APRIL AND OCTOBER EACH YEAR - ISSN 0971-3549

REGISTRAR GENERAL, INDIA

Vital Statistics Division, West Block 1, Wing 1, 2nd Floor, R. K. Puram, New Delhi 110 066

Sample Registration Bulletin which used to be published in July and January is now being published three months earlier in April and October respectively in a new concise format. This effort will facilitate faster dissemination of the SRS results to all the data users. The October issue presents the provisional figures for 1999.

Table 1 gives the provisional estimates of birth rate, death rate and infant mortality rate for India, States and Union territories for the year 1999. Table 2 gives the estimates of birth rate, death rate and infant mortality rate for India, States and Union territories for the latest three years 1996-1998 for comparative reference.

Table 1

Provisional estimates of Birth rate, Death rate, Natural growth rate and Infant mortality rate, 1999

* Excludes Jammu & Kashmir due to part -receipt of returns.

N.A. Not available due to non-receipt of returns.

Note: Infant mortality rate for smaller states/UT's shown against 1996, 1997 and 1998 are for the periods 1994-96, 1995-97 and 1996-98 respectively.

About the Sample Registration System (SRS)

The Sample Registration System (SRS) is a large scale demographic survey for providing reliable annual estimates of birth rate, death rate and other fertility and mortality indicators at the national and sub-national levels. The field investigation consists of

continuous enumeration of births and deaths by a resident part time enumerator, generally a teacher and an independent survey every six months by a computer supervisor. The data obtained through these operations are matched. The unmatched and partially matched events are re-verified in the field and thereafter an unduplicated count of births and deaths is obtained. The SRS was initiated by the OFFICE OF THE REGISTRAR GENERAL, INDIA on a pilot basis in a few selected states in 1964-65 and it became fully operational during 1969-70 with about 3700 sample units. Thereafter the number of sample units was periodically increased. The sample unit in rural areas is a village or a segment of it if the village had a population of 1500 or more. In urban areas the sampling unit is a census enumeration block with a population ranging from 750 to 1000. At present SRS has 6671 sample units (4436 rural and 2235 urban) in all States and Union territories covering about 1.1 million households and 5.98 million population.
